Detailed Breakdown of the DNA Extraction Process and Corresponding Answer Keys

- Sample Preparation

Objective: Obtain a biological sample suitable for DNA extraction, commonly from fruits like strawberries or bananas, or cheek cells.

Common student prompts:

- Why is it important to choose a fresh sample?
- What is the purpose of chopping or mashing the sample?

Answer Key Highlights:

- Fresh samples provide higher-quality DNA with fewer degraded molecules.
- Chopping increases the surface area, facilitating cell rupture during lysis.
- The sample contains cells with DNA housed within the nucleus and cytoplasm.

- Cell Lysis

Objective: Break open cells to release DNA into solution.

Common student prompts:

- What role does the lysis solution play?
- Why are detergents used in this step?

Answer Key Highlights:

- The lysis solution contains detergents (e.g., soap or detergent-based solutions) that dissolve cell membranes by breaking down lipids.
- Detergents help to lyse cells and nuclear membranes, releasing DNA and other cellular components into the solution.
- The solution may also contain salt to help stabilize the DNA.

- Removal of Proteins and Lipids

Objective: Clear the lysate of proteins and lipids that can interfere with DNA isolation.

Common student prompts:

- Why is an enzyme like protease sometimes added?
- What is the purpose of adding alcohol in later steps?

Answer Key Highlights:

- Proteases (e.g., proteinase K) are added to digest proteins bound to DNA or present in the lysate.
- Alcohol (ethanol or isopropanol) is used to precipitate DNA because DNA is insoluble in alcohol, especially when salts are present.
- Removing proteins ensures higher purity of DNA, suitable for downstream applications.

- DNA Precipitation

Objective: Isolate DNA by precipitating it out of solution.

Common student prompts:

- How does alcohol cause DNA to precipitate?
- Why should the alcohol be added slowly?

Answer Key Highlights:

- DNA precipitates because alcohol reduces its solubility in the aqueous solution.

- Adding alcohol slowly and carefully allows DNA strands to form visible clumps or strings.
- The DNA appears as a whitish, thread-like substance that can be spooled or pulled out.

- DNA Washing and Storage

Objective: Purify the precipitated DNA and store it for further analysis.

Common student prompts:

- Why is it necessary to wash the DNA pellet?
- How should the DNA be stored?

Answer Key Highlights:

- Washing with cold alcohol removes residual salts and impurities.
- The purified DNA can be stored in a buffer solution or alcohol at low temperatures to prevent degradation.
- Proper storage ensures the DNA remains intact for analysis or experiments.
