2. Reaction Rates and Kinetics

- **Collision theory:** Molecules must collide with sufficient energy and proper orientation for reactions to occur.
- **Factors affecting reaction rate:** Concentration, temperature, surface area, catalysts.
- **Rate laws:** Mathematical expressions relating reaction rate to concentrations of reactants.

3. Le Châtelier's Principle in Practice

- Predicting the shift in equilibrium when conditions change.
- Understanding the effect of changes in concentration, temperature, and pressure on equilibrium

position.

Effective Practice Strategies for IB Chemistry HL Topic 3

To excel in Topic 3, structured and varied practice is essential. Here are key strategies:

1. Practice Past Papers and Sample Questions

- Use IB past exam papers to familiarize yourself with question formats and timing.

4. Use Visual Aids and Diagrams

- Draw energy profiles, reaction coordinate diagrams, and Le Châtelier's principle illustrations.
- Visualizing the system helps deepen understanding and recall.

Sample Practice Questions for IB Chemistry HL Topic 3

Engage with these sample questions to test your understanding and application skills:

1. Equilibrium Calculations

-

A reaction has the equilibrium expression: $K_c = \frac{[C]^2}{[A][B]}$. If at equilibrium, $[A] = 0.2 \text{ M}$, $[B] = 0.4 \text{ M}$, and $[C] = 0.3 \text{ M}$, calculate the value of K_c .

The reaction: $N_2(g) + 3H_2(g) \rightleftharpoons 2NH_3(g)$. Given initial concentrations, determine the shift in equilibrium when pressure is increased.

2. Reaction Rate and Kinetics

For the reaction $2A + B \rightarrow C$, the rate law is $\text{rate} = k [A]^2 [B]$. If $[A]$ doubles and $[B]$ remains constant, by what factor does the reaction rate increase?

Describe how a catalyst affects the activation energy and reaction rate.

3. Le Châtelier's Principle Applications

Predict the effect of increasing temperature on the position of equilibrium for an exothermic reaction.

How does decreasing the volume of a system containing gases at equilibrium affect the concentrations and the position of equilibrium?

Common Mistakes and How to Avoid Them

Even with practice, students often make similar errors. Being aware of these pitfalls can improve your performance:

1. Misinterpretation of Equilibrium Expressions

- Ensure the correct expression for K_c or K_p is used based on the balanced chemical equation.
- Remember that solids and liquids are omitted from equilibrium expressions.

2. Confusing Reaction Quotient (Q) and Equilibrium Constant (K)

- Q is calculated using current concentrations, while K is specific to equilibrium.
- If $Q > K$, it proceeds in reverse.

3. Overlooking the Role of Temperature

- Remember that K is temperature-dependent.
- Changes in temperature can shift equilibrium, especially in exothermic or endothermic reactions.
