The switch controls the power flow to the motor. Wear and dirt accumulation can cause malfunction or intermittent operation. A replacement switch guarantees reliable control over the tool.

3. Electronic Control Board

This circuit board manages various functions such as speed regulation, overload protection, and soft-start features. Damage to the control board can impair operation, necessitating careful diagnosis and possible replacement.

4. Motor Brushes

Brushes transfer electrical current to the motor's armature. They wear down with use, leading to decreased performance or motor failure. Regular inspection and replacement of brushes maintain motor efficiency.

Mechanical Parts

Mechanical components bear the brunt of operational stresses and need regular inspection and replacement to ensure the tool continues functioning smoothly.

1. Bearings

Bearings support rotating shafts within the motor and gear assembly. Worn bearings can cause excessive vibration, noise, and eventual damage to other parts. Replacing bearings prevents further mechanical failure.

2. Gears and Gear Assemblies

The TE 50 employs a complex gear system to transfer impact energy and rotational force. Gears can wear out, strip, or break under heavy loads. Spare gear sets or individual gears are essential for restoring power transmission.

3. Clutch Components

The clutch protects the motor and gearbox from overloads. Parts such as clutch plates and springs may need replacement when slipping or failure occurs.

4. Pistons and Ram Assemblies

The piston and ram assembly generate the impact force for drilling and chiseling. Wear on these parts reduces impact energy, so maintaining or replacing them is crucial for performance.

Housing and External Components

External parts protect internal components and facilitate safe operation.

1. Housing Shells and Covers

Cracks or damage to the housing can compromise safety and dust protection. Replacement shells restore structural integrity and safeguarding of internal parts.

2. Handle Components

Handles provide grip and control. Worn or broken handles are replaced to maintain ergonomic operation and safety.

3. Carbon Brushes Holders

Holders maintain the position of brushes and facilitate easy replacement. Damaged holders may require replacement to ensure proper electrical contact.

4. Ventilation Grills and Filters

Proper airflow prevents overheating. Damaged or clogged filters and grills should be replaced to maintain cooling efficiency.

Accessories and Consumables

While not technically spare parts of the tool itself, these components are essential for maintaining peak performance.

1. Drill Bits and Chisels

Designed specifically for concrete, masonry, or other materials, these accessories wear out or become dull, requiring replacement or sharpening.

2. SDS+ Chiseling Attachments

The SDS+ system ensures quick bit change and secure fitment. Damaged or worn attachments should be replaced to maintain safety and efficiency.

3. Oil and Lubricants

Proper lubrication of moving parts prolongs lifespan. Using the correct lubricants as spare parts ensures smooth operation.
